

MCO2 TOKEN

WHAT IS THE MCO2 TOKEN?

- The **MCO2 Token** makes carbon credits accessible, programmable and composable
- 1 **MCO2 Token** = 1 carbon credit from a VCS certified environmental project (forestry, energy, biomass, etc)
- The **MCO2 Token** democratizes carbon offsetting and massively increases funding for the conservation of the environment and for Greenhouse Gas Emission reduction

ENTER THE MCO2 TOKEN

Easy and efficient against climate change

Burn 1 token on Moss platform = compensate 1 ton of CO2 footprint

Endless possibilities

Carbon credits become programmable and composable for the first time, opening up a universe of possibilities for developers

More than a product, a global platform

All carbon credits are issued by a globally recognized voluntary carbon registry

20% global market share

US\$ 10 million transacted in 6 months

1 million hectares conserved

15 times the size of NYC

Improvement

Of the local communities

(Ongoing)

(Ongoing)

High credibility

ERC20 token – “very high confidence” rating and security audit from Certik

Transparent ledger

Real time visibility on Trustexplorer, audited by Armanino (ongoing EY audit)

Unlimited emission schedule

The goal is to generate as much carbon offset and funding for carbon abatement and Amazon conservation as possible

Mco2 tokens are designed for offset

Flexibility

Tokens may be detokenized into carbon credits on the Moss website and vice versa
